

Aniket Yadav

Software Engineer

Lucknow, Uttar Pradesh, India · anikety7905@gmail.com · [linkedin.com/in/aniketyadav29](https://www.linkedin.com/in/aniketyadav29) · github.com/Aniketyadav29

EDUCATION

Bachelor of Technology in Computer Science & Engineering (Pursuing)

2023 – 2027

Babu Banarasi Das University, Lucknow — School of Engineering

TECHNICAL SKILLS

Languages	Python, JavaScript, Java, C, SQL, HTML, CSS
Backend & APIs	Node.js, Flask, Twilio, Telethon, OAuth2
Frontend	Next.js, React, Tailwind CSS
Databases	Supabase, PostgreSQL, MongoDB, SQLite
AI / ML	RAG Pipelines, Sentence Transformers, Prompt Engineering, XGBoost
Tools & Process	Git, GitHub, VS Code, Linux

PROJECTS

CREDO AI — Loan Risk Prediction System

Python · XGBoost · Gemini LLM · SQL · MongoDB [GitHub](#) · 2026 · Team

- Independently built an AI-driven credit scoring platform for microfinance institutions to assess borrower risk and minimize loan defaults, combining structured ML with LLM-based unstructured data analysis.
- Trained an XGBoost model on structured financial data alongside Google Gemini LLM to analyze alternative data for comprehensive risk profiling; designed a hybrid SQL + MongoDB backend optimized for query performance.

AI Drowsiness Detector — Real-Time Vision System

Python · OpenCV · Dlib · NumPy [GitHub](#) · 2026 · Solo

- Built a real-time computer vision system to detect driver fatigue and prevent accidents by monitoring eye closure via webcam feed — implemented facial landmark detection using Dlib with Eye Aspect Ratio (EAR) thresholding.
- Integrated a real-time audio alert pipeline that triggers immediate audible warnings when sustained drowsiness is detected, enabling deployment in safety-critical driving environments.

AAYU — Ayurvedic AI WhatsApp Health Assistant

Python · Flask · Twilio · Google Gemini API [GitHub](#) · 2026 · Solo

- Built a WhatsApp conversational AI assistant using Flask and Twilio to provide natural language Ayurvedic health recommendations, integrating a collapsed Retrieval-Augmented Generation (RAG) pipeline to query local databases and reduce API latency.
- Engineered a guided step-by-step consultation flow utilizing severity-based logic (mild, moderate, severe) to evaluate user symptoms, alongside a persistent SQLite-backed gamified health tracker and daily routine planner.

EXPERIENCE

Open Source Contributions — actively seeking Software Internship opportunities in Python / Backend / AI-ML Engineering

ACHIEVEMENTS

- Soft Skills & Technical Training Program** — Completed intensive program by Learnovate Enterprises, Babu Banarasi Das University (2025), covering professional communication, teamwork, and applied technical problem-solving.

CERTIFICATIONS

HackerRank — Python (Basic), Frontend Developer (React), CSS (Basic) **Learnovate Enterprises** — Soft Skills & Technical Training (2025)

ADDITIONAL INFORMATION

Soft Skills	Problem Solving, Decision Making, Communication, Team Collaboration, Leadership
Languages Known	English, Hindi
